

Specifications

Dimensions:	90 x 50 mm
Summer/Winter time:	automatic switching
Tripping sensitivity:	0,1°C
Control range:	8–28°C, plus valve open/ON and shut/OFF
Batteries:	2 x AA/R6 (not included); usual service life: 2 heating periods
Factory default settings:	21°C from 7:00 a.m.; 16°C from 10:00 p.m.

SPARmatic is Pro-Active:

Manual setting possible at any time. The manually selected temperature has priority until the next programme period.

Weekly timer: 4 individually programmable switch points/day, the smallest switch interval is 10 minutes; Setting of individual day-blocks possible.

Open window detection: If the thermostat registers a significant drop in temperature (airing out the room) the valve will close automatically and reopen after 10 minutes

Anti-calcification function: To prevent valve calcification, SPARmatic runs an anti-calcification programme once a week.

Vacation and summer programme, antifreeze function

Suitable for any type of room, with child protection

More comfort - Less heating-costs

Shivering in the bathroom in the morning? Warming your hands on the coffee cup? Never again!!

Do you have to turn on the heating in kitchen or bathroom when you get up in the morning? Wouldn't it be nicer to have the bathroom already nicely warmed-up? We have the pro-active thermostat SPARmatic that does that job for you! SPARmatic is a programmable radiator thermostat.

It is simple to install and operate and you can choose your own daily or weekly heating- and savings-period. No more turning the thermostat regulator all the time! Simply programme your desired heating- and savings-times and SPARmatic sets the temperature accordingly.

The option of programming various time profiles makes it possible to set differing heating-times for weekends. SPARmatic is ideally suited to the heating-systems of all types of rooms, from baths and kitchens to children's, living- and bedrooms to offices.

The range of use also includes commercially used rooms as the programming can ensure that pleasant room temperatures are only effective during working-hours. At quitting time the thermostat switches back into the energy-savings mode. This can reduce heating costs up to 30%!

Easy to change if necessary

You can easily change the temperature at any time by turning the control wheel. Thus you can adjust the temperature up to the next programmed interval with a simple twist of your hand, e.g. if you are leaving the office earlier than usual, coming to the office on Sunday or want to keep the living-room warm late because you have guests.

The programme takes over again as usual at the next set interval.

Super-easy operation

Knurled screw
for easy fitting without tools

Display
of operating mode, set temperature and programme status

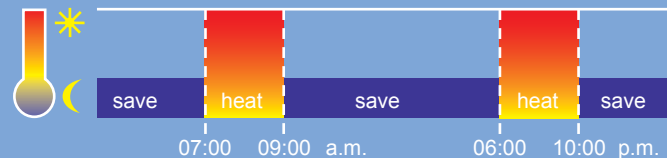

Key block
for programming time and temperature, switching to „manual control“, switching child protection

Control wheel
for setting time and temperature; and you can adjust the temperature manually at any time

Your individual comfort programme

SPARmatic is ready for use instantly: Set date and time, and you can start with the factory default setting. This starts the first heating interval at 7:00 a.m., the first savings-interval at 10:00 p.m.

Creating your individual programme is easy, using the 3 keys, for the whole week, a single day or a block of days, e.g. Monday thru Friday and Saturday–Sunday. As you like it, individually for every day and every room.

The result:

Maximum comfort combined with up to 30% energy savings and environment protection

Fitting without tools

Easily without tools and without grime because the hot water circuit is not opened and thus no water can escape.

Unscrew the old thermostat

Screw on SPARmatic

A self-test is running and SPARmatic is ready to operate in its basic programme

If you move, simply take SPARmatic with you.

SPARmatic comes with 3 different adapters to fit all renowned radiator valves, e.g. Heimeier, Danfoss, Braukmann, Honeywell NMG e.a.

Quality made in Germany
